

# Storm Drain Marking

## IN LEXINGTON CENTER

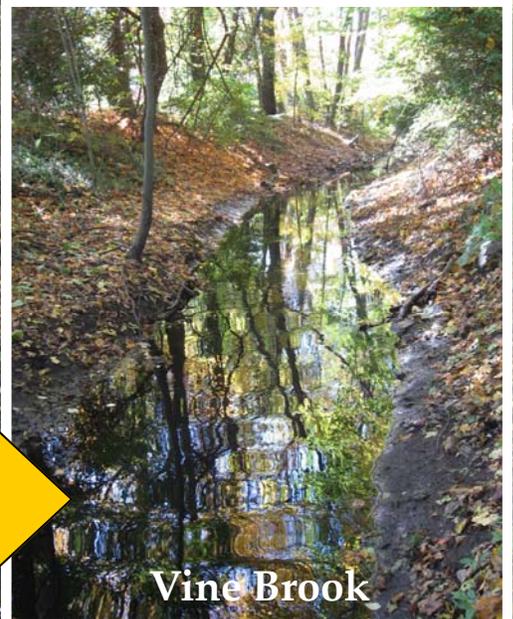

Look for new storm drain markers in Lexington Center, installed by Watershed Stewardship volunteers. Storm drain markers alert us to the connection between storm drains and the health of local streams. Water that drains from Lexington Center enters storm drains that empty into Vine Brook, Lexington's largest stream. Pollutants picked up by run-off or dumped into storm drains go directly to Vine Brook, too. You can help to protect Vine Brook by properly disposing of pet waste, paint, detergent, oil, and other pollutants that could otherwise enter a storm drain.
